### 3.8 PG series

#### 3.8.1 Properties of the PG series linear guideways

The HIWIN linear guideways of the PG series are a special version of the HG/QH/CG series with integrated MAGIC magnetic position measuring system. The magnetic positioning measuring systems of the MAGIC series are optimised for measuring the distances travelled in linear movements and particularly on linear motor axes. The measuring system consists of a magnetic measurement strip on a stainless steel carrier strip and an encoder unit. The rugged housing with excellent electrical shielding and signal output in real time make the HIWIN MAGIC series the positioning measuring systems of choice for demanding applications.

In the PG series, the encoder is mounted directly on the block of the HG/QH/CG series.

The magnetic tape is integrated in an additional groove in the HGR/CGR profile rails.

The MAGIC positioning measuring system is also available in a version independent of the profile rail. The position of the magnetic tape and encoder can then be specified at a suitable location to suit the customer. For details, please refer to the "Linear motors & positioning measuring systems" catalogue.

#### 3.8.2 Layout of PG series

- Blocks of HG/QH/CG series
- Profile rail of the HG/CG series with additional groove for the measuring tape
- Encoder can be mounted on blocks of sizes HG\_20, HG\_25, QH\_20, QH\_25, CG\_20 and CG\_25
- Mounting direction: When facing the reference edge of the block, the encoder is located on the left side by default. The line of the encoder is also located on the side of the reference edge

#### Properties:

- Zero contact measurement with 1 V<sub>SS</sub> or digital output
- Digital resolution 1 µm
- Encoder and housing are resistant to dust, humidity, oil and chips
- Encoder with metal housing and IP67 protection mode
- Simple assembly and adjustment
- Signal output in real time
- Special housing for EMC optimisation

### 3.8.3 Order code of PG series

[illegible]

Continuation of order codes of PG series

[illegible]

<sup>1)</sup> PGH, PGQ: not identical in construction with standard rail HGR25R without groove. Mounting screw M5 instead of M6

<sup>2)</sup> For the PG series, the total number of blocks per axis is specified (all blocks of the ordered item)

<sup>3)</sup> The number 2 is also a quantity indication, i.e. one piece of the article described above consists of one pair of rails. No number is given for single profile rails. In the case of multi-part rails, the joint is offset as standard.

<sup>4)</sup> If not specified, the block is supplied with standard dust protection (standard end seal and lower sealing strip). For an overview of the different sealing systems, see Page 22

<sup>5)</sup> For open ends, select cable length 1,000 by default (max. length PGH, PGQ: 5,000 mm; PGC: 1,000 mm)

<sup>b)</sup> The display must be ordered separately

7) See section 3.8.6

<sup>8)</sup> Only available for PGC

### 3.8.6 Alignment of HIWIN MAGIC-PG encoder

The HIWIN MAGIC-PG encoder can be delivered in alignments 1 to 4 according to the order code (section 3.8.3). If the alignment is not specified, the encoder is delivered with alignment 1 by default.

If there are several blocks on one rail or on a pair of rails, the encoder is mounted on block 1, rail 1 as shown in the following figure. If an alignment deviating from the standard is required, this must be defined in the MAGIC-PG project planning sheet ([www.hiwin.de](http://www.hiwin.de)).

### 3.8.7 Specifications of the HIWIN MAGIC and HIWIN MAGIC-PG positioning measuring systems

### 3.8.8 Connection of MAGIC positioning measuring system

#### 3.8.8.1 Line assignment (for analogue and digital variants)

A high-quality 8-core cable is used, each V1+, V1-, V2+, V2- and V0+, V0- (or A,  $\bar{A}$ , B,  $\bar{B}$  and Z,  $\bar{Z}$  for the digital variant) twisted in pairs.

For use in energy chains, we generally recommend our pre-assembled extension

cables, which are specially designed for use in energy chains. The extension cables are supplied with a single-sided M17 round plug connector (coupling, female) or a customer-specific version.

#### 3.8.8.2 Formats and outputs

##### Signal format sin/cos 1 V<sub>SS</sub> output (analogue)

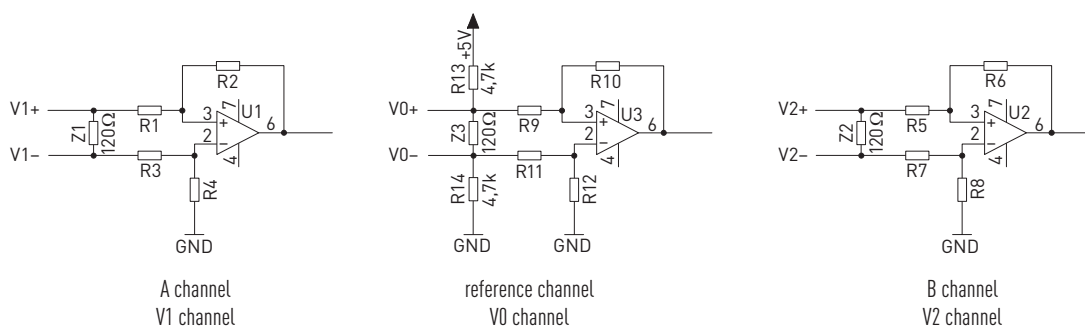

The electrical signals after the differential input of the downstream electronic components. The HIWIN-MAGIC-PG interface sin/cos 1 V<sub>SS</sub> is strictly based on the Siemens

specification. The period length of the sine output signal is 1 mm. The period length of the reference signal is 1 mm.

##### Electrical signals after the difference input of the subsequent electronics (analogue version)

### Recommended downstream electronic circuit with sin/cos-1 $V_{SS}$ output

### TTL output (digital)

The signals to the A and B channels phase-shifted by  $90^\circ$  (according to the RS-422 specifications conforming to DIN 66259). Recommended terminating resistance  $Z = 120\Omega$ . Output signals: A,  $\bar{A}$ , B,  $\bar{B}$  and Z,  $\bar{Z}$ . Single reference pulse and the definition of a minimum pulse duration are possible as an option.

### Signals of the MAGIC encoder (TTL version)

### Recommended switching of the downstream electronic components with digital TTL output
